Call2Recycle’s 2016 Pricing (Rechargeable Batteries)

Changes from the 2015 rechargeable battery pricing structure:

1. Each battery chemistry has its own specific fee.
2. The annual cap has been removed.
3. Ni-Cd fees are now calculated in the same manner as other rechargeable batteries.
4. Li-Ion batteries are now split into two categories based on the cobalt and/or nickel content of the battery cell.
5. Base fees are calculated according to jurisdiction: USA, Canada (non-Quebec) and Quebec (only “Obligated Enterprises”).
6. Recycling credit is based on the amount of batteries a steward recycles through the Call2Recycle program (US).
